

10055-DG 50mm Pocket Sections

Concept Architectural Systems is proud to announce the 50mm Pocket Sections to suit the *10055-DG Centre Glazed system*.

50MM POCKET SECTIONS

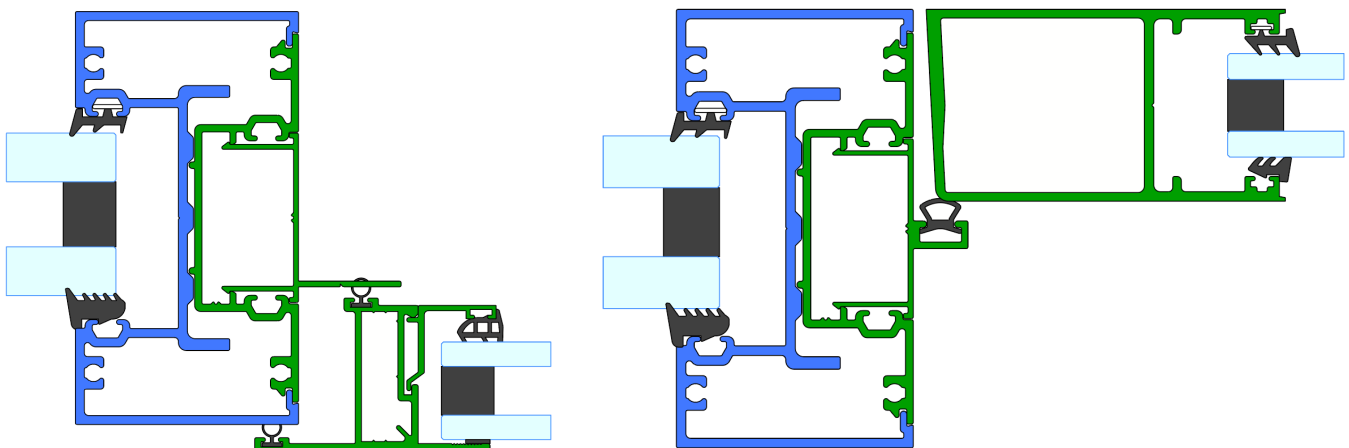

The new 50mm Pocket sections are a range of new, heavy duty extrusions based on the 10055-DG Centre Glazed frame. The new sections include a wide 50mm glazing pocket, which can accept very wide IGU's (up to 44mm) in fixed panels. This will substantially increase the maximum allowed glass dimensions compared to thinner double glazed units, allowing for larger panels.

The new sections are significantly heavier and stronger than the standard 10055-DG sections, allowing them to support the heavier weight of very large double glazed units.

COUPLING

The new 50mm Pocket sections are fully compatible with the existing 10055-DG sections, allowing the 2 systems to be freely coupled together. This allows the new sections to be coupled with awnings, hinge doors and the range of Ultramax windows.

50mm Pocket sections (blue) coupling with awning and hinge doors (green)

GLAZING

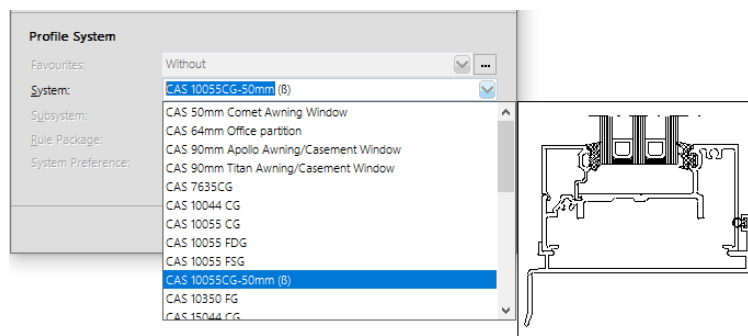

The new 50mm Pocket Sections can be dry glazed with existing glazing rubbers and captive wedges. They can also be wet glazed as needed.

Glazing (A)	Wedge (B)	Captive Wedge (C)
34mm D/G	PF0774-1	PX0096
36mm D/G	PF0774-3	PX0096
38mm D/G	PX0085	PX0096
40mm D/G	PF0774-2	PX0005
42mm D/G	PF0774-3	PX0026
44mm D/G	PF0774-5	PX0026

The new sections allow the 10055-DG frame to be glazed up from 34mm up to 44mm. Smaller IGU's (22mm up to 32mm) can be used in the standard 10055-DG sections.

SOFTWARE

The new sections are now available in Logikal. They can be found in a standalone system, under the name "CAS 10055CG-50mm".

AVAILABILITY

All sections are now in stock and immediately available.
