

SLIDING WINDOW FLYSCREEN CHANNEL SECTIONS

Concept Architectural Systems is proud to announce the new **flyscreen channel sections** to suit the **Zeus** and **Ultramax** sliding windows.

The new sections improve the way flyscreens are fitted to the windows.

The 2 new sections are the **DGS88** channel adapter, and the **DGS89** plant-on interlock adapter.

The **DGS89** is riveted directly to the back of the fixed panel interlock. It includes an overlapping leg that covers the side of the flyscreen, and allows an **FC1** clip to be used to hold it in place.

The fixed panel interlock no longer requires the **EC60** end caps. Caps are still required to be fitted to the sliding panel(s).

The **DGS88** clips into the bottom, side and top of the frame and forms a channel that the flyscreen inserts into, providing coverage.

5mm foam tape **FS475** is applied inside the bottom channel for the flyscreen to sit on.

Stock of the new sections is now available and the new sections will be available in software (LogiKal and V6) shortly.

The new sections will eventually replace the existing **DGS73** flyscreen adapter.
