

Silver Tooling Package

Concept Aluminium Systems is proud to offer three tailored tooling package options ranging from Silver, Gold, and Platinum, with each designed to provide every fabricator with a solution that meets their project requirements, budget, and operational needs. To ensure we meet fabricators receive the best tooling we have partnered with industry-leading tooling suppliers, including AluMACH and Emmegi, to deliver the highest quality tooling available, ensuring precision, reliability, and long-term performance.

Each tooling package has been curated to streamline fabrication processes, improve productivity, and support fabricators in delivering premium aluminium window and door systems. With Concept Aluminium Systems, you get solutions that combine quality, efficiency, and versatility for every project size.

To enquire about any of the tooling featured in this brochure, please contact our sales team, who can provide you with further assistance.

Emmegi Norma E

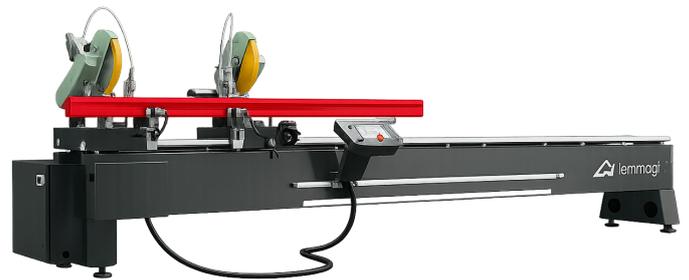

Scan QR code for more information

The Emmegi Norma E is a robust twin-head cutting machine designed for precise aluminium profile cutting at a variety of angles. Its manually positioned mobile head with a magnetic measurement system, combined with flexible head rotation and tilt, ensures accurate compound cuts. The intuitive control panel helps optimise cutting lists to reduce scrap and improve production efficiency.

Features

- Manual mobile head positioning with absolute magnetic strip measurement for consistent cut accuracy
- Wide range of angular cutting capability with head rotation from -45° to $+45^{\circ}$ and horizontal tilting for compound angles
- Hydro pneumatic blade feed with adjustable feed speed supports smooth, controlled cutting
- Pneumatic horizontal and vertical clamping with safety low-pressure device for secure profile hold
- Micro-mist lubrication system improves blade life and cut quality
- Control panel with personalised interface

Emmegi MSP400 Compound Single Mitre Saw

Scan QR code for demonstration

Emmegi MSP400 is a single-head compound mitre saw, featuring a down-stroking cutting action with left-hand loading. The cutting head rotates 45° for mitre cuts and manually tilts up to 45° on the horizontal axis, allowing accurate compound cutting for a wide range of aluminium profiles.

Features

- One-piece heavy-duty base and gas-strut for soft head return
- 400mm diameter blade
- Pneumatic horizontal clamping
- Fixed stops at -45° , 90° and $+45^{\circ}$
- Head tilting for compound mitres
- 3 phase brake motor
- Roller bearing system to ensure smooth head movement
- Locking pin for quick and easy blade changes

PROFI STOP 4.5m Digital Stop

Scan QR code for demonstration

The ALPHA Advanced Digital Length Stop system is a simple, high-speed solution for cutting aluminium profiles to length. Its intuitive operation delivers exceptional productivity compared to manual cutting, making it easy to handle both large and complex jobs quickly and efficiently.

Features

- Heavy-duty table with fast and accurate stop
- Auto length stop and push feeding capabilities
- Intuitive touchscreen interface for fast setup and reduced operator error
- Connection to cutting lists from Logikal software

Roller Conveyor

Scan QR code for more information

This Roller Conveyor provides a simple and reliable solution for moving materials efficiently within your workshop. Its sturdy construction ensures smooth and consistent handling of products, reducing manual effort and streamlining workflow. Ideal for integration into any tooling or fabrication setup, it offers durability and ease of use for everyday operations.

Features

- 6.0 meters in length
- 20 PVC coated rollers
- Designed to suit the Emeggi MSP400 Single Mitre Saw
- Improves workflow efficiency by reducing manual handling and speeding up material movement
- Durable and low-maintenance, built to withstand regular use
- Flexible integration for easy incorporation into existing tooling or production setups

Emmegi Lilliput 290M End-Milling Machine

Scan QR code for demonstration

The Emmegi Lilliput 290M is a horizontal end-milling machine with manual feed, designed for precise mitre milling at 90°. It features quick cutter change with manual control for efficient operation. The machine is equipped with a scratch-resistant work table and full guarding to ensure a safe and secure work zone.

Features

- Heavy-duty base for stability and precision
- Quick and easy tool change for efficient operation
- Pneumatic clamping for secure and consistent workpiece holding
- Oil mist spray for smooth cutting and extended tool life
- Fully enclosed work zone for maximum safety
- Pre-made cutter stacks designed to suit CAS sections

Emmegi Copia 314S Single Spindle Copy Router

Scan QR code for more information

The Emmegi Copia 314S is a manual single-head copy router featuring long vertical travel and precise cutting head traverse, operated via handle or indirect lever. It allows through-machining operations to be completed without the need to turn the workpiece, improving efficiency and accuracy.

Features

- Heavy-duty base for stability and precision
- Smooth spindle movement for consistent cutting quality
- Pneumatic horizontal clamping for secure workpiece holding
- Oil mist spray for enhanced tool life and cleaner cuts
- Lockwood 590 lock template for accurate routing
- Moveable length-stop for flexible operation
- Custom templates available to suit specific project requirements

Emmegi EDGE Rotating Expandable Work Bench

Scan QR code for demonstration

The Emmegi EDGE Rotating Expandable Work Bench is ideal for the assembly of window and door frames of all sizes. Its rotating, sliding, and extendable top allows operators to work comfortably on both small and very large structures, ensuring complete safety and precision. Designed for efficiency and versatility, it provides stable support and smooth handling throughout every assembly operation.

Features

- 250kg load capacity
- Pneumatic system with 2 quick-connect taps
- Sliding and width-adjustable supporting tables
- Height adjustable work bench
- Soft PVC contact surface
- Feet with holes for ground fixing
- Sliding and length-adjustable supporting table
- Small parts containers
- Benches for laying tools and accessories

Emmegi ACCA XL Expandable Work Bench

Scan QR code for demonstration

The Emmegi Acca XL Expandable Work Bench is the perfect solution for the precise assembly of window and door frames. Its sliding and extendable top can accommodate frames of all sizes, including very large structures, allowing operators to work efficiently and safely. Designed for versatility and durability, it ensures smooth handling and stable support throughout every assembly operation.

Features

- 250kg load capacity
- Pneumatic system with 2 quick-connect taps
- Sliding and width-adjustable supporting tables
- Height adjustable work bench
- Soft PVC contact surface
- Feet with holes for ground fixing
- Sliding and length-adjustable supporting table
- Small parts containers
- Benches for laying tools and accessories
